

AZ-305

Designing Microsoft Azure Infrastructure Solutions

AZ-305 Agenda

Module 01 Design a governance solution

Module 02 Design a compute solution

Module 03 Design a non-relational data storage solution

Module 04 Design a data storage solution for relational data

Module 05 Design a data integration solution ←

Module 06 Design an application architecture solution

Module 07 Design Authentication and Authorization Solutions

Module 08 Design a solution to log and monitor Azure resources

Module 09 Design a network infrastructure solution

Module 10 Design a business continuity solution

Module 11 Design a migration solution

Design a data integration solution

Learning Objectives

- Design a data integration solution with Azure Data Factory
- Design a data integration solution with Azure Data Lake
- Design a data integration and analytics solution with Azure Databricks
- Design a data integration and analytics solution with Azure Synapse Analytics
- Design Azure Stream Analytics solution for Data Analysis
- Design a strategy for hot/warm/cold data path
- Case study
- Learning recap

AZ-305: Design Data Storage Solutions
(20-25%)

Design Data Integration

- Recommend a solution for data integration
- Recommend a solution for data analysis

Design a data integration solution with Azure Data Factory

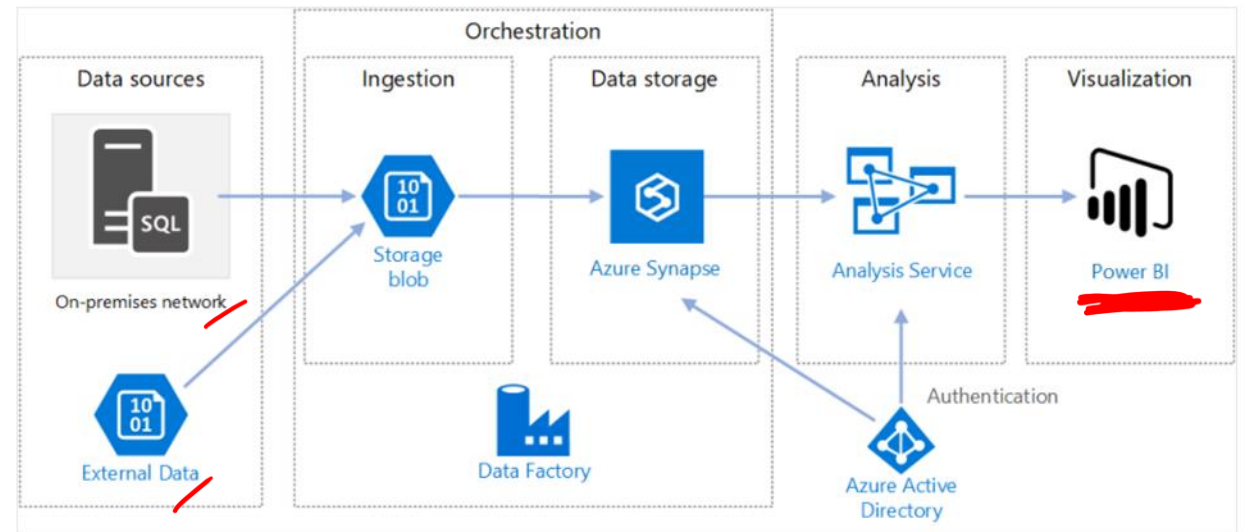

Data-driven workflows

Azure Data Factory is a cloud-based ETL and data integration service that can help you create and schedule data-driven workflows (called pipelines) that can ingest data from disparate data stores.

You can use Azure Data Factory to:

1. Orchestrate data movement.
2. Transform data at scale.

Design a data integration solution with Azure Data Lake

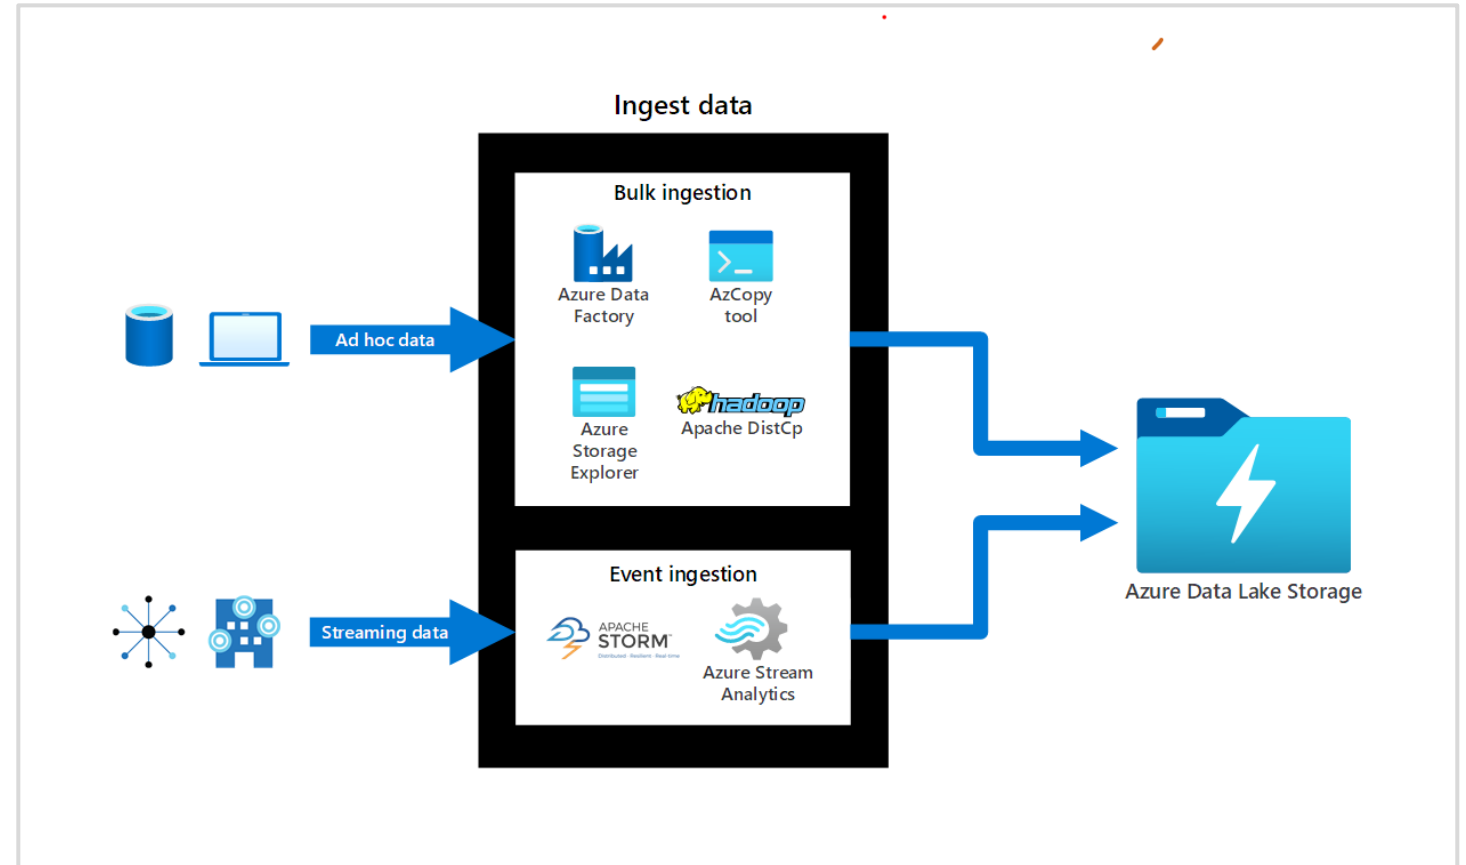

Azure Data Lake

Azure Data Lake Storage is a comprehensive, scalable, and cost-effective data lake solution for big data analytics built into Azure.

Use Azure Data Lake when you need:

- a data repository on the cloud for managing large volumes of data
- To manage a diverse collection of data types such as JSON files, CSV, log files or other diverse formats
- Real-time data ingestion and storage

Compare Azure Data Lake to Azure Blob storage

| Criteria | Azure Data Lake | Azure Blob Storage |
|----------------------|--|---|
| Data type | Good for storing large volumes of text data | Good for storing unstructured non-text-based data such as photos, videos, backup etc. |
| Namespace support | Supports hierarchical namespaces | Supports flat namespaces |
| Hadoop compatibility | Optimized for big data, like <u>Hadoop</u> | Is not Hadoop compatible |
| Security | Access Control Lists (ACLs), shared keys, SAS and RBAC | Shared keys, SAS, and RBAC |

container

Design a data integration and analytics solution with Azure Databricks

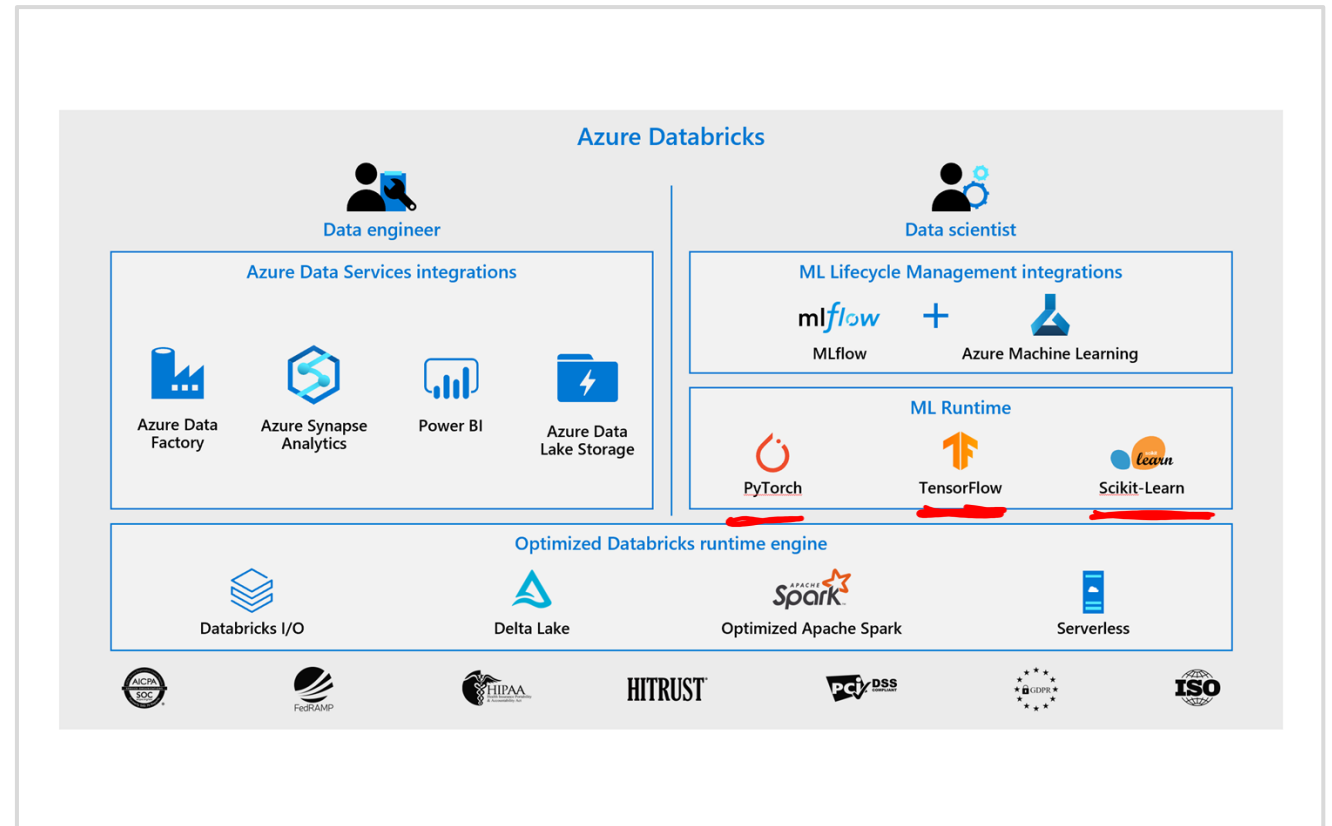

Azure Databricks

Azure Databricks is a fully managed, cloud-based Big Data and Machine Learning platform, which empowers developers to accelerate AI and innovation.

Provides data science and engineering teams with a single platform for Big Data processing and Machine Learning.

Offers three environments for developing data intensive applications:

- Databricks SQL
- Databricks Data Science & Engineering
- Databricks Machine Learning.

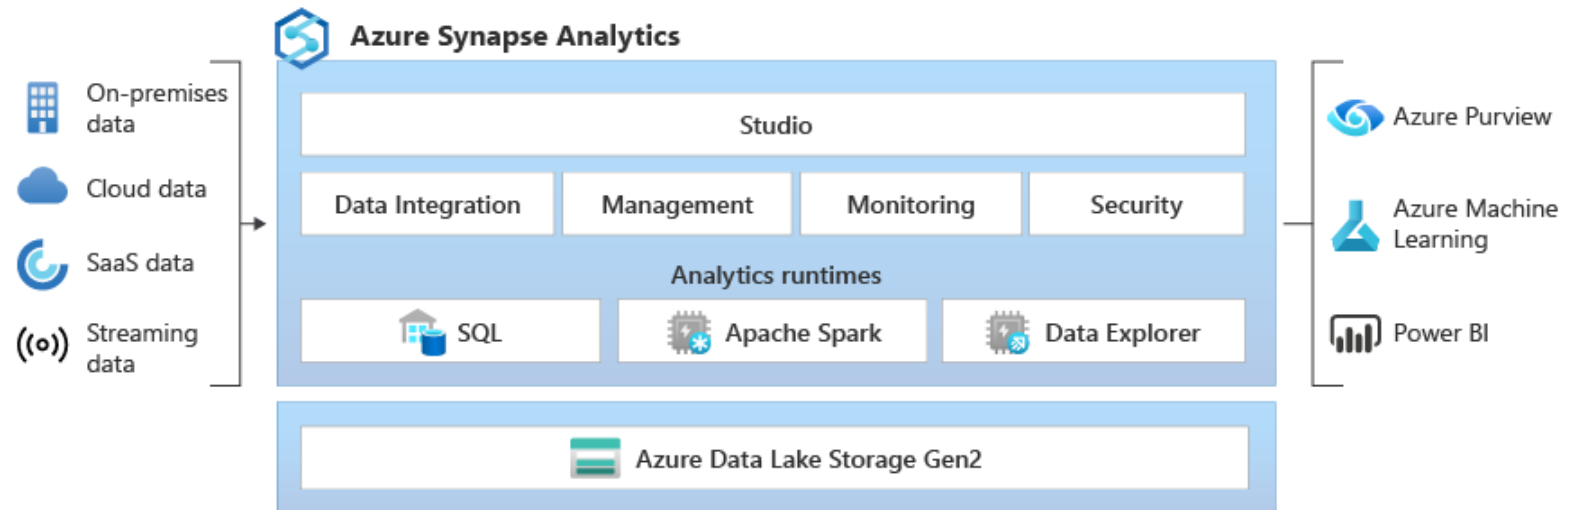

Design a data integration and analytics solution with Azure Synapse Analytics

Azure Synapse Analytics

Azure Synapse Analytics is an integrated analytics platform that brings together data integration, enterprise data warehousing, big data analytics and visualization into a single service. Azure Synapse Analytics is an evolution of Azure SQL Data Warehouse.

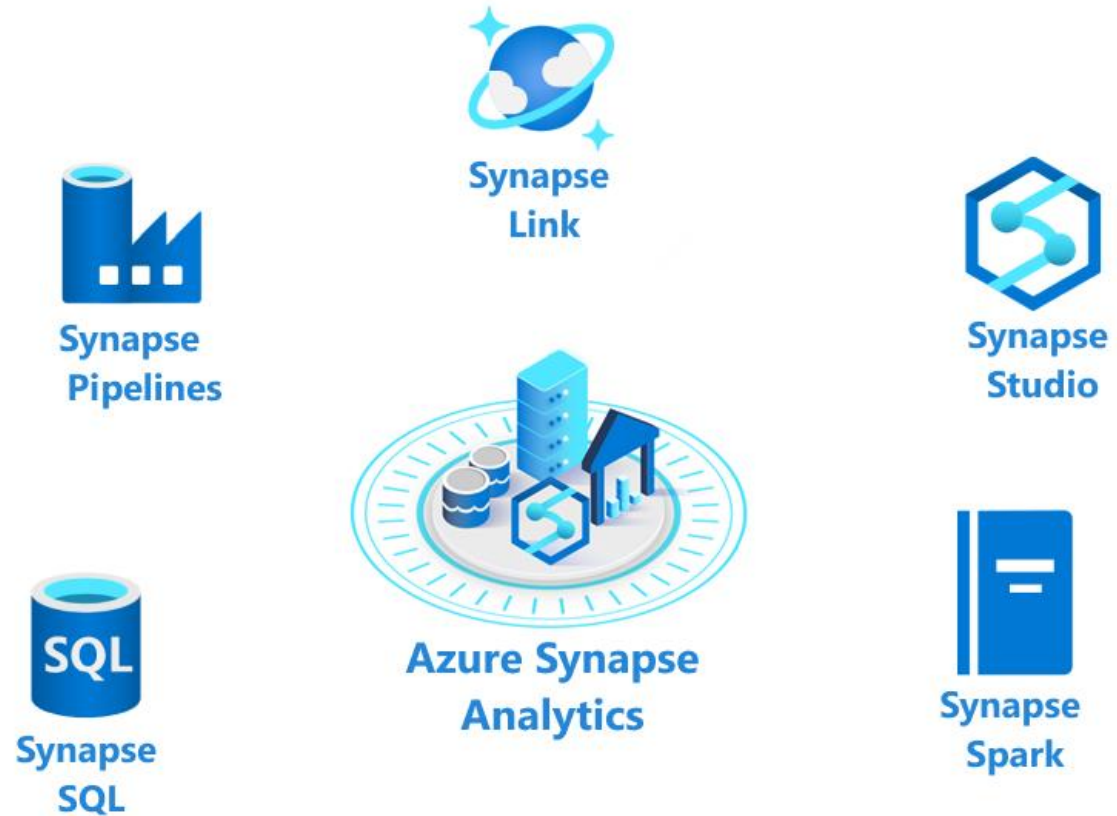

- Modern data warehousing
- Advanced analytics
- Data exploration and discovery
- Real time analytics
- Data integration
- Integrated analytics
- Machine Learning

Components of Azure Synapse Analytics

Elements

- Synapse SQL pool
- Synapse Spark pool
- Synapse Pipelines
- Synapse Link
- Synapse Studio

What kind of analytics can you do with Azure Synapse Analytics?

Descriptive analytics - "What is happening?"

Azure Synapse Analytics leverages the dedicated SQL pool capability that enables you to create a persisted data warehouse to perform this type of analysis.

Diagnostic analytics - "Why is it happening?"

You can use the serverless SQL pool capability within Azure Synapse Analytics that enables you to interactively explore data within a data lake.

Predictive analytics - "What is likely to happen?"

Azure Synapse Analytics uses its integrated Apache Spark engine and Azure Synapse Spark pools for predictive analytics with other services such as Azure Machine Learning Services, or Azure Databricks.

Prescriptive analytics - "What needs to be done?"

This type of analytics looks at executing actions based on real-time or near real-time analysis of data, using predictive analytics.

Compare Azure Data Factory to Azure Synapse Analytics

| Criteria | Azure Data Factory | Azure Synapse Analytics |
|--|---|--|
| Integration runtime sharing | Can be shared across different data factories | No sharing |
| Solution templates | Provided with Azure Data Factory template gallery | Provided with Synapse Workspace Knowledge center |
| Integration Runtime cross region support | Support Cross region data flows | Does not support cross region data flows |
| Monitoring of Spark Jobs for Data Flow | Not supported | Supported by the Synapse Spark pools |

Compare Synapse to Databricks

Azure Synapse Analytics and Azure Databricks offer different capabilities which may be combined if required

| Capabilities | Databricks | Synapse |
|------------------|---|---|
| Machine Learning | <ul style="list-style-type: none">Optimized runtimes with support for TensorFlow, PyTorch, and Keras.GPU support | <ul style="list-style-type: none">Built-in support Azure MLTrain models using SparkML, MLlib and other open-source librariesGPU-accelerated pools |
| Feature Set | <ul style="list-style-type: none">Optimized Apache Spark environment | <ul style="list-style-type: none">Distributed T-SQL systemSpark environmentData IntegrationUnified experience with Synapse Studio |
| Reporting | <ul style="list-style-type: none">Azure Databricks connection available in PowerBI | <ul style="list-style-type: none">PowerBI available directly from Synapse Studio |

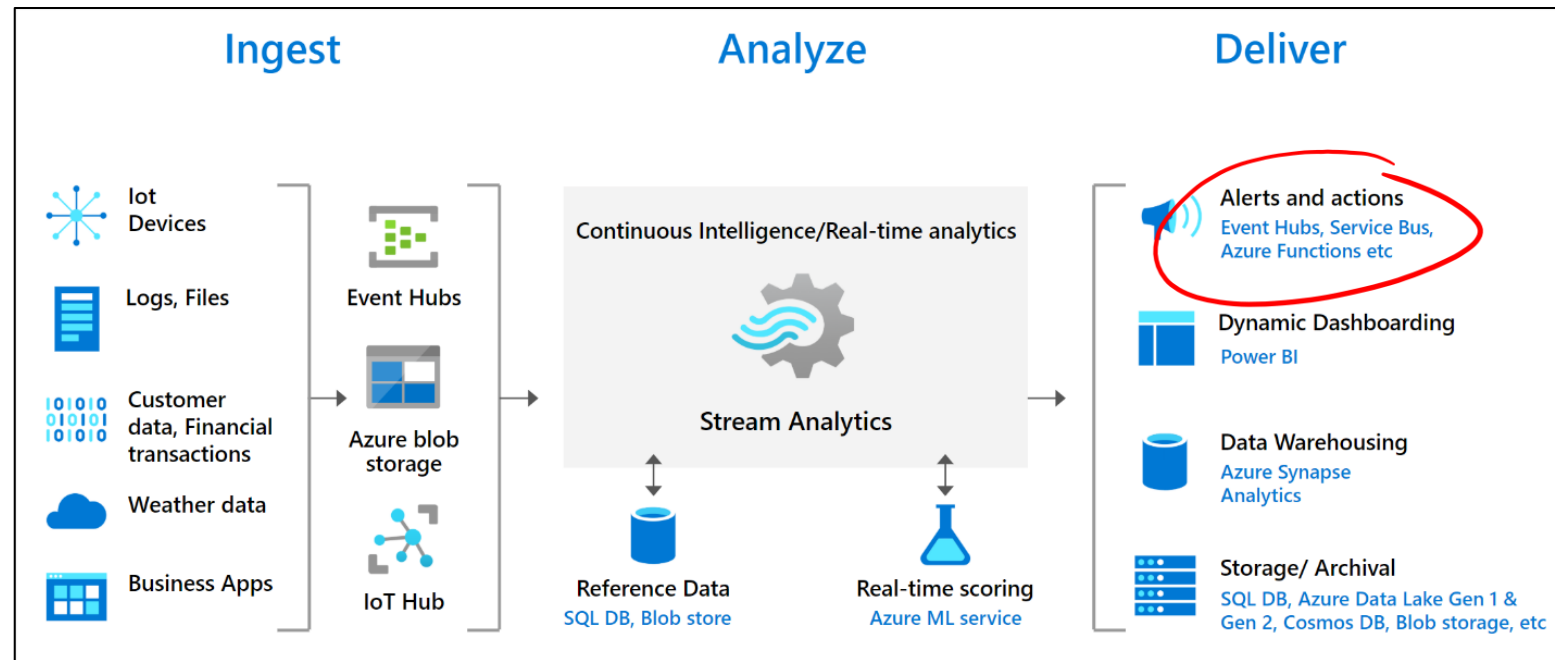

Design Azure Stream Analytics solution for Data Analysis

Azure Stream Analytics

Azure Stream Analytics is a real-time analytics and complex event-processing engine that is designed to analyze and process high volumes of fast streaming data from multiple sources simultaneously.

- Analyze real-time telemetry streams from IoT devices
- Web logs/clickstream analytics
- Geospatial analytics for fleet management and driverless vehicles
- Remote monitoring and predictive maintenance of high value assets
- Real-time analytics on point-of-sale data for inventory control and anomaly detection

Design a strategy for
hot/warm/cold data path

When to use Hot/Warm/Cold data path

| Path | Requirement |
|----------------|--|
| Hot data path | <ul style="list-style-type: none">• When data requirements are known to change frequently• When processing or displaying data in real time |
| Warm data path | <ul style="list-style-type: none">• When you need to store or display a recent subset of data• Used for data that is consumed for small analytical and batch processing |
| Cold data path | <ul style="list-style-type: none">• When data is rarely used. The data might be stored for compliance or legal reasons• Used for data that is consumed for long term analytics and batch processing |

Case study and review

Use Case: Just-in-time inventory
